

TWINLOCK FABRICATED FENCE

SINCE 1903

Twinlock netting is New Zealand's most trusted prefabricated fence.

Twinlock netting provides farmers with a fast and cost-effective solution for temporary and permanent stock control.

Suitable for low and medium pressure applications. Twinlock netting is manufactured using zinc/aluminium alloy coated wire for long life and is available in 2.00mm and 2.50mm wire diameters.

A versatile, easy-to-install prefabricated fence, Twinlock uses a continuous knot to securely join the line and stay wires, creating a flexible fence that is well suited to a wide range of rural applications. Available in Field, Light and Soft configurations, Twinlock can be used for sheep, cattle and goats, conservation and forestry blocks, low-pressure lifestyle and residential fencing, as well as electrified break feeding and lamb docking applications.

Applications	
Field	Sheep, cattle, goats, conservation and forestry block
Soft	Can be electrified break feeding. Lambs / docking
Light	Low stock pressure, lifestyle and residential fences

Size Range Available					
Type	Description	Line Wires	Roll Height (mm)	Stay Spacing Width (mm)	Length (m)
Field	A16 / 1900	16	1900	240	100
Light*	A13 / 1900	13	1900	150 / 300	100
	A11 / 1550	11	1550	150 / 300	100
	A5 / 900	5	900	300	200
Soft**	A5 / 600	5	600	300	200

* Light uses a 2.00 mm high tensile wire for the line wire.

** Soft uses a low tensile wire for the line wire.

Cyclone fencing is manufactured by United Wire Products and meets the WIREMARK® Quality Standard.
